Lean Six Sigma Series

"Explore the Obvious"

TBI offers a unique remedy for our clients who do not have 3-5 years to mobilize their lean programs. **A Lock-Step Program with Black Belt Certification has a timeframe of 12-months; 15 months for Master Black Belt Certification.**

Lean Six Sigma **LockStep Program**

Candidates are placed into a highly interactive, accelerated learning environment that introduces the Belts consecutively while managing an enterprise wide improvement initiative case study. Content is easy to understand and the toolboxes are the same as in the traditional Certification Courses.

Candidates still receive the full experience, but in a project management style framework. The Belt journey refers back to prior findings of earlier belt sessions, which connects the disciplines throughout the life cycle of the improvement projects examined.

What Will I Learn?

Lean Practitioner Candidates will become more empowered in their...

- Dialogue with steering committees and improvement teams
- Possessing a toolbox customized for simple to complex projects
- Learn to effectively coach other belt levels and SMEs in the concepts of process improvement
- Enabled to strategically ask the right "Whys" and track sustainable progress.
- Become more effective and efficient in your leadership styles regardless of the strategic planning initiative facilitated.

Excellence
is our Habit!
